Object Oriented Programming

CSIT — 2nd Semester — 2079 — Answer Sheet

Subject Code: CSC166

Note: This answer sheet is currently a template. Detailed answers will be added progressively. Students are encouraged to refer to textbooks and class notes.

Section A

1. What is aggregation? Write a program for implementing following.Create a class author with attributes name and qualification.Also create a class publication with pname. Form these classes o crive a class book having attribute title and price.Each of three classes should have a get data () method to get their data from user. The classes should have put data () method to display the data.Create instances of the class book in main.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

2. What is operator overloading? Why it is necessary to overload and operator? Write a program for overloading comparison operators.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

3. What is the use of constructor and destructor? Write a program for illustrating default constructor, parameterized constructor and copy constructor.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

Section B

Attempt any Eight questions[8×5=40]

4. Describe the characteristics of object oriented programming languages.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

5. Define class and object with suitable examples. How members of class can be accessed?

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

6. What is inline function? Why it is used? Write a program to illustrate inline function.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

7. **What are possible data conversion types? Write a program to show basis to user defined conversion.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

8. **What are the various class access specifies? How public inheritance differs from private inheritance?**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

9. **Write a program to implement function template with multiple arguments.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

10. **Write a program to illustrate the use of seekg() and tellg().**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

11. **How dynamic memory allocation is done using new and delete? Write program for illustrating use of new and delete.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

12. **Write Short note On :a) Friend Functionb) Early binding and late binding**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]
