

2075

Bachelor of Science in Computer Science and Information Technology

Course Title: **C Programming**

Code No: **CSC115** Semester: **1st Semester**

Full Marks: **60** Pass Marks: **24** Time: **3 hours**

Candidates are required to answer the questions in their own words as far as practicable.

Section A

1. What is looping statement? Discuss different looping statements with suitable example of each.
2. Define array? What are the benefits of using array? Write a program to add two matrices using array.
3. Why do we need data files? What are the different file opening modes? Write a program that reads data from a file "input.txt" and writes to "output.txt" file.

Section B

Attempt any Eight questions[8×5=40]

4. Discuss different logical operations in details.
5. What is break statement? Discuss with example. How the break statement is different from continue statement?
6. Write a program to check whether a number entered is even or odd.
7. Write a program to calculate sum of first 10 odd numbers.
8. What is preprocessor directive? Discuss #define derivative with example.
9. Discuss any five string library functions.
10. What is dynamic memory allocation? Discuss the use of malloc () in dynamic memory allocation with example.
11. What is structure? Create a structure rectangle with data members length and breath.
12. Write short note on:a) Benefits of data filesb) Graphics functions.
