Bachelor of Science in Computer Science and Information Technology

Course Title: **C Programming**

Code No: **CSC115** Semester: **1st Semester**

Full Marks: **60** Pass Marks: **24** Time: **3 hours**

Candidates are required to answer the questions in their own words as far as practicable.

Section A

1. List different types of operators and explain any four of them.
2. What are the characteristics of array? Write a program to input age of 500 persons and display the followinga) Average ageb) Age between 25 to 30
3. Differentiate between library function and user defined function. Write a program to swap two values using call by reference concept.

Section B

Attempt any Eight questions[8×5=40]

4. Explain the basic structure of C Programming.
5. Describe different formatted input and output functions. Why do we use them?
6. Write a program to display first 50 prime numbers.
7. Write a program to display the following series up to 25 terms but do not print the 7th term. 2x3, 3x5, 4x7, 5x9...
8. Demonstrate the use of recursive function with a suitable example.
9. Create a structure called STUDENT with data members SID, name, address, CGPA. Write a program to initialize the value of 100 students and display the information of those students whose address is "KTM" and CGPA is between 3.5 to 4.
10. Explain different file opening modes.
11. Write a program to draw two shapes of your choice using graphics function.
12. Write short notes on:a) Global variableb) Debugging
