

2079

Bachelor of Science in Computer Science and Information Technology

Course Title: **Computer Networks**

Code No: **CSC263** Semester: **4th Semester**

Full Marks: **60** Pass Marks: **24** Time: **3 hours**

Candidates are required to answer the questions in their own words as far as practicable.

Section A

1. What is protocol? Explain each layer of OSI model in detail.
2. Differentiate error detection with error correction. Explain CRC (Cyclic Redundancy Check) method for error detection with suitable example.
3. Explain distance vector routing with example.

Section B

Attempt any Eight questions[8×5=40]

4. Why do we need network topology? Explain star topology along with its merits and demerits.
5. Define protocol. Why do we need standards?
6. Write subnet ID and broadcast address of each subnet if you divide a class C network (192.168.3.0-192.168.3.255) in 4 different subnets. What is the new subnet mask?
7. What is circuit-switched network? Explain phases during communication in a circuit-switched network.
8. What is virtual circuit network? Explain frame relay as a virtual circuit wide area network.
9. Why TCP is called connection oriented and reliable protocol? Differentiate TCP with UDP.
10. Explain architecture of WWW. What is URL?
11. Explain in brief about software defined network? What are its features?
12. Write short notes on (any two)a. Protocol and standardsb. Switchc. Checksum
