

Microprocessor

CSIT — 2nd Semester — 2080 — Answer Sheet
Subject Code: CSC167

Note: This answer sheet is currently a template. Detailed answers will be added progressively. Students are encouraged to refer to textbooks and class notes.

Section A

- 1. Differentiate between 8085 and 8086 microprocessor. Explain the concept of demultiplexing of address bus and why is it required?**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

- 2. Write an Assembly Language Program for calculating the factorial of a number using 8085 microprocessor.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

- 3. Draw the block diagram of 80286 microprocessor and explain.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

Section B

Attempt any Eight questions[8×5=40]

- 4. What is Paging? Explain the concept of memory access in protected mode.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

- 5. What is the importance of direct memory access? Explain the mechanism of direct memory access.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

- 6. List different types of ports. What are the main characteristics of programmable interrupt controller 8259A?**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

- 7. Differentiate between instruction cycle and machine cycle. Draw timing diagram of MVI A, 32 H.**

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

8. Write an Assembly Language Program to reverse the given string.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

9. Explain different types of system buses and also indicate whether they are unidirectional or bidirectional.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

10. What is the significance of interrupt masking? Differentiate between vectored and polled interrupt.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

11. Illustrate memory access in GDT.

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

12. Write short notes on: a) Jumps b) Accumulator

Answer: [Detailed answer will be added soon. Students should write a comprehensive answer covering key concepts, examples, and diagrams where applicable.]

These answer sheets are prepared for educational purposes. Students are encouraged to verify with official textbooks and course materials.
